Now, we can create instances of `SupportRequest` from our mailbox.

Creating Support Requests from Our Mailbox

Our mailbox needs to do two things. First, it needs to create an instance of `SupportRequest` for each email that comes in. But it also needs to connect that request to the user's most recent order, if there's one in our database (this will allow our admin to quickly reference the order that might be causing trouble).

As you recall, all orders have an email associated with them. So, to get the most recent order for an email, we can use `where` to search all orders by email: `order` to order the results by the create data and `first` to grab the most recent one. With that, we can use the methods on `mail` we saw earlier to create the `SupportRequest`.

Here's the code we need in `app/mailboxes/support_mailbox.rb` (which replaces the calls to `puts` we added before):

rails80/depot_tb/app/mailboxes/support_mailbox.rb

```
  class SupportMailbox < ApplicationMailbox
    def process
»     recent_order = Order.where(email: mail.from_address.to_s).
»                          order("created_at desc").
»                          first
»     SupportRequest.create!(
»       email: mail.from_address.to_s,
»       subject: mail.subject,
»       body: mail.body.to_s,
»       order: recent_order
»     )
    end
  end
```

Why Don't We Access Emails Directly When Needed?
