```
    # previous test

»   test "we create a SupportRequest with the most recent order" do
»     recent_order  = orders(:one)
»     older_order   = orders(:another_one)
»     non_customer  = orders(:other_customer)
»
»     receive_inbound_email_from_mail(
»       to: "support@example.com",
»       from: recent_order.email,
»       subject: "Need help",
»       body: "I can't figure out how to check out!!"
»     )
»
»      support_request = SupportRequest.last
»      assert_equal recent_order.email, support_request.email
»      assert_equal "Need help", support_request.subject
»      assert_equal "I can't figure out how to check out!!", support_request.
  body
»      assert_equal recent_order, support_request.order
»   end

  end
```

Next, rerun the test, and we should see our new test is passing:

```
> bin/rails test test/mailboxes/support_mailbox_test.rb
Run options: --seed 47513

# Running:

..

Finished in 0.384217s, 5.2054 runs/s, 20.8216 assertions/s.
2 runs, 8 assertions, 0 failures, 0 errors, 0 skips
```

Nice! We can now confidently write code to handle incoming emails and test it with an automated test. Now, what do we do with these `SupportRequest` instances we're creating? We'd like to allow an administrator to respond to them. We could do that with plain text, but let's learn about another part of
