```
»                 <li>
»                   <%= line_item.product.title %>
»                   (<%= line_item.product.price %>)
»                 </li>
»               <% end %>
»             </ul>
»           </dd>
»         </dl>
»       <% else %>
»         <h3 class="notice">No associated order</h3>
»       <% end %>
»       <%= form_with(model: support_request,
»                     local: true,
»                     class: "depot_form") do |form| %>
»         <div class="field">
»           <%= form.label :response, "Write Response" %>
»           <%= form.rich_textarea :response, id: :support_request_response %>
»         </div>
»         <div class="actions">
»           <%= form.submit "Send Response" %>
»         </div>
»       <% end %>

        <hr>
      </li>
    <% end %>
  </ul>
```

Restart your server, create a few orders and, using the Rails conductor we saw earlier, create a few support tickets. Be sure that at least one of them is from an email you used to create an order. When you've done that, navigate to `http://localhost:3000/admin` and log in. Once you've done *that*, navigate to `http://localhost:3000/support_requests` and you should see the UI you just created with your support requests rendered:
