so the HTML mail view in app/views/support_request_mailer/respond.html.erb will look fairly straightforward:

rails80/depot_tc/app/views/support_request_mailer/respond.html.erb

```
<%= @support_request.response %>
<hr>
<blockquote>
  <%= @support_request.body %>
</blockquote>
```

We also want to include a plain-text version, since not everyone wants rich text in their emails. In the case of a plain-text email, we want to strip out the rich text from our response. Action Text provides a method to do that, called to_plain_text, which we can use in app/views/support_request_mailer/respond.text.erb:

rails80/depot_tc/app/views/support_request_mailer/respond.text.erb

```
<%= @support_request.response.to_plain_text %>

---

<%= @support_request.body %>
```

The last step is to add a call to our mailer when we update the SupportRequest:

```
class SupportRequestsController < ApplicationController
  def index
    @support_requests = SupportRequest.all
  end

  def update
    support_request = SupportRequest.find(params[:id])
    support_request.update(response: params.require(:support_request)[
:response])
»     SupportRequestMailer.respond(support_request).deliver_now
    redirect_to support_requests_path
  end
```
