These are automatically updated with the timestamp of a row's creation or last update. Make sure the underlying database column is capable of receiving a date, datetime, or string. Rails applications conventionally use the `_on` suffix for date columns and the `_at` suffix for columns that include a time.

id

This is the default name of a table's primary key column (in *Identifying Individual Rows*).

xxx_id

This is the default name of a foreign key reference to a table named with the plural form of ***xxx***.

xxx_count

This maintains a counter cache for the child table `xxx`.

Additional plugins, such as `acts_as_list`,[152] may define additional columns.

Both primary keys and foreign keys play a vital role in database operations and merit additional discussion.
