The following are the available database adapters and the links to their respective home pages:

Firebird	https://rubygems.org/gems/fireruby
JDBC	https://rubygems.org/search?query=jdbc
MySQL	https://rubygems.org/gems/mysql2
Oracle	https://rubygems.org/gems/activerecord-oracle_enhanced-adapter
Database	
Postgres	https://rubygems.org/gems/pg
SQL Server	https://github.com/rails-sqlserver
SQLite	https://github.com/luislavena/sqlite3-ruby
Trilogy	https://rubygems.org/gems/trilogy

What We Just Did

In this chapter, we installed everything you need to get you up and running:

- We installed (or upgraded) the Ruby language.
- We installed (or upgraded) the Rails framework.
- We selected an editor.
- We installed (or upgraded) the SQLite 3 database.

Now that we have Rails installed, let’s use it. It’s time to move on to the next chapter, where you’ll create your first application.
