Suggests to the browser that the file should be displayed inline (option `inline`) or downloaded and saved (option `attachment`, the default).

`:filename` *string*
: A suggestion to the browser of the default filename to use when saving this data.

`:status` *(string)*
: The status code (defaults to `"200 OK"`).

`:type` *(string)*
: The content type, defaulting to `application/octet-stream`.

`:url_based_filename` *boolean*
: If `true` and `:filename` isn't set, this option prevents Rails from providing the basename of the file in the Content-Disposition header. Specifying the basename of the file is necessary to make some browsers handle i18n filenames correctly.

A related method is `send_file`, which sends the contents of a file to the client.

```
send_file(path, options…)
```

This sends the given file to the client. The method sets the Content-Length, Content-Type, Content-Disposition, and Content-Transfer-Encoding headers.

`:buffer_size` *(number)*
: The amount sent to the browser in each write if streaming is enabled (`:stream` is true).

`:disposition` *(string)*
: Suggests to the browser that the file should be displayed inline (option `inline`) or downloaded and saved (option `attachment`, the default).

`:filename` *(string)*
