In each regular template, use a `content_for` to give a name to the content rendered inside a block. This content will be stored inside Rails and won't contribute to the output generated by the template:

```
<h1>Regular Template</h1>

<% content_for(:sidebar) do %>
  <ul>
    <li>this text will be rendered</li>
    <li>and saved for later</li>
    <li>it may contain <%= "dynamic" %> stuff</li>
  </ul>
<% end %>
<p>
  Here's the regular stuff that will appear on
  the page rendered by this template.
</p>
```

Then, in the layout, use `yield :sidebar` to include this block in the page's sidebar:

```
<!DOCTYPE .... >
<html>
  <body>
    <div class="sidebar">
      <p>
        Regular sidebar stuff
      </p>
      <div class="page-specific-sidebar">
»       <%= yield :sidebar %>
      </div>
    </div>
  </body>
</html>
```

This same technique can be used to add page-specific JavaScript functions into the `<head>` section of a layout, create specialized menu bars, and so on.

Partial-Page Templates
