number matches the database version and *undoes* it. It repeats this process until there are no more versions listed in the `schema_migrations` table that exceed the number you specified on the command line. That is, the migrations are unapplied in reverse order to take the schema back to the version that you specify.

You can also redo one or more migrations:

```
depot> bin/rails db:migrate:redo STEP=3
```

By default, `redo` will roll back one migration and rerun it. To roll back multiple migrations, pass the `STEP=` parameter.
