```
        'credit card',
        'purchase order'
      )
    }
  end

  def down
    execute "DROP TYPE pay_type"
  end
end
```

Note that if you need to model your database using `execute`, you should consider changing your schema dump format from "ruby" to "SQL," as outlined in the Rails Guide.[168] The schema dump is used during tests to create an empty database with the same schema you're using in production.

Custom Messages and Benchmarks

Although not exactly an advanced migration, something that's useful to do within advanced migrations is to output our own messages and benchmarks. We can do this with the `say_with_time` method:

```
def up
  say_with_time "Updating prices..." do
    Person.all.each do |p|
      p.update_attribute :price, p.lookup_master_price
    end
  end
 end
```

`say_with_time` prints the string passed before the block is executed and prints the benchmark after the block completes.
