Add rspec-rails to your `Gemfile`, putting it in the development and test groups:

```
group :development, :test do
  gem 'rspec-rails'
end
```

After you `bundle install`, a new generator will set up RSpec for you:

```
> bin/rails generate rspec:install
    create  .rspec
    create  spec
    create  spec/spec_helper.rb
    create  spec/rails_helper.rb
```

Verify the configuration is working by running the new task Rspec installed, `spec`:

```
> bin/rails spec
No examples found.

Finished in 0.00058 seconds (files took 0.11481 seconds to load)
0 examples, 0 failures
```

Let's reimplement the test for `Cart` as an RSpec test or *spec*. RSpec includes generators to create starter specs for us, similar to what Rails does with scaffolding. To create a model spec, use the `spec:model` generator:

```
> bin/rails generate spec:model Cart
      create  spec/models/cart_spec.rb
```

Now rerun `spec`, and we can see RSpec's generator has created a pending spec:

```
> bin/rails spec
Pending: (Failures listed here are expected and do not affect
          your suite's status)

  1) Cart add some examples to (or delete) spec/models/cart_spec.rb
```
