```
  aside#notice = notice

h1 = t('.title_html')

ul.catalog
  - cache @products do
    - @products.each do |product|
      - cache product do
        li
          = image_tag(product.image)
          h2 = product.title
          p = sanitize(product.description)
          .price
            = number_to_currency(product.price)
            = button_to t('.add_html'),
                line_items_path(product_id: product, locale: I18n.locale),
                remote: true
```

Restart your server if you have it running, and you should see the home page render the same as before.

In addition to being able to render Slim, installing **slim-rails** changes Rails generators to create Slim files instead of ERB, so all of the scaffolding and other generators you're used to will now produce Slim templates automatically. You can even convert your existing ERB templates to Slim by using the **erb2slim** command, available by installing the **html2slim** RubyGem. [174]
