rails80/demo5/app/views/say/goodbye.html.erb

```
    <h1>Goodbye!</h1>
    <p>
      It was nice having you here.
    </p>
»   <p>
»     Say <%= link_to "Hello", say_hello_path %> again.
»   </p>
```

So far, we've just done things that should work, and—unsurprisingly—they've worked. But the true test of the developer friendliness of a framework is how it responds when things go wrong. As we've not invested much time into this code yet, now is a perfect time to try to break things.
