Methods

Let's write a method that returns a cheery, personalized greeting. We'll invoke that method a couple of times:

```
def say_goodnight(name)
  result = "Good night, " + name
  return result
end

# Time for bed...
puts say_goodnight("Mary-Ellen") # => "Goodnight, Mary-Ellen"
puts say_goodnight("John-Boy")   # => "Goodnight, John-Boy"
```

Having defined the method, we call it twice. In both cases, we pass the result to the `puts` method, which outputs to the console its argument followed by a newline (moving on to the next line of output).

You don't need a semicolon at the end of a statement as long as you put each statement on a separate line. Ruby comments start with a `#` character and run to the end of the line. Indentation isn't significant. (But two-character indentation is the de facto Ruby standard.)

Ruby doesn't use braces to delimit the bodies of compound statements and definitions (such as methods and classes). Instead, you simply finish the body with the `end` keyword. The `return` keyword is optional, and if it's not present, the results of the last expression evaluated are returned.
