Now, if we add a product with an invalid price, the appropriate message will appear, as shown in the following screenshot.

Why test against one cent rather than zero? Well, it's possible to enter a number such as 0.001 into this field. Because the database stores just two digits after the decimal point, this would end up being zero in the database, even though it would pass the validation if we compared against zero. Checking that the number is at least one cent ensures that only correct values end up being stored.

We have two more items to validate. First, we want to make sure that each product has a unique title. One more line in the `Product` model will do this. The uniqueness validation will perform a check to ensure that no other row in the `products` table has the same title as the row we're about to save:

```
validates :title, uniqueness: true
```

Lastly, we need to validate that the URL entered for the image is valid. We'll do this by using the `format` option, which matches a field against a regular
