expression. For now, let's just check that the URL ends with one of `gif`, `jpg`, or `png`:

```
validates :image_url, allow_blank: true, format: {
  with:    %r{\.(gif|jpg|png)\z}i,
  message: 'must be a URL for GIF, JPG or PNG image.'
}
```

The regular expression matches the string against a literal dot, followed by one of three choices, followed by the end of the string. Be sure to use vertical bars to separate options, and backslashes before the dot and the lowercase `z`. If you need a refresher on regular expression syntax, see *Regular Expressions*.

Note that we use the `allow_blank` option to avoid getting multiple error messages when the field is blank.

Later, we'd probably want to change this form to let the user select from a list of available images, but we'd still want to keep the validation to prevent malicious folks from submitting bad data directly.

So in a couple of minutes we've added validations that check the following:

- The title, description, and image URL fields aren't empty.
- The price is a valid number not less than $0.01.
- The title is unique among all products.
- The image URL looks reasonable.

Your updated `Product` model should look like this:

rails7/depot_b/app/models/product.rb

```
class Product < ApplicationRecord
  validates :title, :description, :image_url, presence: true
  validates :title, uniqueness: true
  validates :image_url, allow_blank: true, format: {
    with:    %r{\.(gif|jpg|png)\z}i,
    message: 'must be a URL for GIF, JPG or PNG image.'
  }
  validates :price, numericality: { greater_than_or_equal_to: 0.01 }
```
