```
end
```

We can rerun just the unit tests by issuing the `rails test:models` command. When we do so, we now see the test execute successfully:

```
depot> bin/rails test:models
Run options: --seed 63304

# Running:

.

Finished in 0.021068s, 47.4654 runs/s, 237.3268 assertions/s.
1 runs, 5 assertions, 0 failures, 0 errors, 0 skips
```

Sure enough, the validation kicked in, and all our assertions passed.

Clearly, at this point we can dig deeper and exercise individual validations. Let's look at three of the many possible tests.

First, we'll check that the validation of the price works the way we expect:

rails7/depot_c/test/models/product_test.rb

```
test "product price must be positive" do
  product = Product.new(title:       "My Book Title",
                        description: "yyy",
                        image_url:   "zzz.jpg")
  product.price = -1
  assert product.invalid?
  assert_equal ["must be greater than or equal to 0.01"],
    product.errors[:price]

  product.price = 0
  assert product.invalid?
  assert_equal ["must be greater than or equal to 0.01"],
    product.errors[:price]

  product.price = 1
  assert product.valid?
end
```

In this code, we create a new product and then try setting its price to `-1`, `0`, and `+1`,
