our test is out-of-date.

The specifics of the problem might not be obvious from the test failure message, but the failure for `should create product` gives us a clue: “Product.count didn’t change by 1.” Since we just added validations, it seems likely that our attempts to create a product in the test are creating an invalid product, which we can’t save to the database.

Let’s verify this assumption by adding a call to `puts` in the controller’s `create` method:

```
  def create
    @product = Product.new(product_params)

    respond_to do |format|
      if @product.save
        format.html { redirect_to @product,
          notice: "Product was successfully created." }
        format.json { render :show, status: :created,
          location: @product }
      else
»       puts @product.errors.full_messages
        format.html { render :new,
          status: :unprocessable_entity }
        format.json { render json: @product.errors,
          status: :unprocessable_entity }
      end
    end
  end
```

If we rerun just the test for creating a new product, we’ll see the problem:

```
  > bin/rails test test/controllers/products_controller_test.rb:19
  # Running:

Title has already been taken
F

Failure:
ProductsControllerTest#test_should_create_product [«path to test»]
"Product.count" didn't change by 1.
Expected: 3
```
