```
  Actual: 2

bin/rails test test/controllers/products_controller_test.rb:18

Finished in 0.427810s, 2.3375 runs/s, 2.3375 assertions/s.
1 runs, 1 assertions, 1 failures, 0 errors, 0 skips
```

Our `puts` is printing the validation error, which in this case is "Title has already been taken." In other words, we're trying to create a product whose title already exists. Instead, let's create a random book title and use that instead of the value coming out of the test fixture. First, we'll create a random title in the `setup` block:

rails7/depot_b/test/controllers/products_controller_test.rb

```
require "test_helper"

class ProductsControllerTest < ActionDispatch::IntegrationTest
  setup do
    @product = products(:one)
»   @title = "The Great Book #{rand(1000)}"

  end
```

Next, we'll use that instead of the default `@product.title` that the Rails generator put into the test. The actual change is highlighted (the use of `@title`), but the code had to be reformatted to fit the space, so this will look a bit different for you:

rails7/depot_b/test/controllers/products_controller_test.rb

```
test "should create product" do
  assert_difference("Product.count") do

  post products_url, params: {
      product: {
        description: @product.description,
        image_url: @product.image_url,
        price: @product.price,
»       title: @title,
      }
    }

  end
```
