Iteration C2: Adding a Page Layout

The pages in a typical website often share a similar layout; the designer will have created a standard template that's used when content is placed. Our job is to modify this page to add decoration to each of the store pages.

If you look at the `html.erb` files we've created so far, you won't find any reference to style sheets. You won't even find the HTML `<head>` section where such references would normally live. Instead, Rails keeps a separate file that's used to create a standard page environment for the entire application. This file, called `application.html.erb`, is a Rails layout and lives in the `layouts` directory: we can change the look and feel of the entire site by editing this one file. This makes us feel better about putting a placeholder page layout in for now; we can update it when the designer eventually returns from the islands.

Let's update this file to define a banner and a sidebar:

rails7/depot_e/app/views/layouts/application.html.erb

```
<!DOCTYPE html>
<html>
  <head>
»   <title>Pragprog Books Online Store</title>
    <meta name="viewport" content="width=device-width,initial-scale=1">
    <%= csrf_meta_tags %>
    <%= csp_meta_tag %>
    <%= stylesheet_link_tag "inter-font", "data-turbo-track": "reload" %>
    <%= stylesheet_link_tag "tailwind", "data-turbo-track": "reload" %>

    <%= stylesheet_link_tag "application", "data-turbo-track": "reload" %>
    <%= javascript_importmap_tags %>
  </head>

  <body>
»   <header class="bg-green-700">
»     <%= image_tag 'logo.svg', alt: 'The Pragmatic Bookshelf' %>
»     <h1><%= @page_title %></h1>
»   </header>
»
```
