Iteration C5: Caching of Partial Results

If everything goes as planned, this page will definitely be a high-traffic area for the site. To respond to requests for this page, we'd need to fetch every product from the database and render each one. We can do better than that. After all, the catalog doesn't change that often, so there's no need to start from scratch on each request.

So we can see what we're doing, we're first going to modify the configuration for the development environment to turn on caching. To make this easy, Rails provides a handy command to toggle caching on and off in the development environment:

```
depot> bin/rails dev:cache
```

Note that this command will cause your server to automatically restart.

Next we need to plan our attack. Thinking about it, we only need to rerender things if a product changed, and even then we need to render only the products that actually changed. So we need to make two small changes to our template.

First, we mark the sections of our template that we need to update if any product changes, and then inside that section we mark the subsection that we need in order to update any specific product that changed:

rails7/depot_e/app/views/store/index.html.erb

```
<div class="w-full">
<% if notice.present? %>
  <p class="py-2 px-3 bg-green-50 mb-5 text-green-500 font-medium rounded-lg
            inline-block" id="notice">
    <%= notice %>
  </p>
<% end %>

<h1 class="font-bold text-xl mb-6 pb-2 border-b-2">
  Your Pragmatic Catalog
</h1>
```
