The `set_cart` method starts by getting the `:cart_id` from the `session` object and then attempts to find a cart corresponding to this ID. If such a cart record isn't found (which will happen if the ID is `nil` or invalid for any reason), this method will proceed to create a new `Cart` and then store the ID of the created cart into the session.

Note that we place the `set_cart` method in a `CurrentCart` module and place that module in a new file in the `app/controllers/concerns` directory.[47] This treatment allows us to share common code (even as little as a single method!) among controllers.

Additionally, we mark the method as `private`, which prevents Rails from ever making it available as an action on the controller.
