```
  class LineItemsController < ApplicationController
»   include CurrentCart
»   before_action :set_cart, only: %i[ create ]
    before_action :set_line_item, only: %i[ show edit update destroy ]

    # GET /line_items or /line_items.json
    #...
  end
```

We include the CurrentCart module and declare that the set_cart method is to be involved before the create action. We explore action callbacks in depth in *Callbacks*, but for now all you need to know is that Rails provides the ability to wire together methods that are to be called before, after, or even around controller actions.

In fact, as you can see, the generated controller already uses this facility to set the value of the @line_item instance variable before the show, edit, update, or destroy actions are called.

Now that we know that the value of @cart is set to the value of the current cart, all we need to modify is a few lines of code in the create method in app/controllers/line_items_controller.rb. to build the line item itself:

rails7/depot_f/app/controllers/line_items_controller.rb

```
    def create
»     product = Product.find(params[:product_id])
»     @line_item = @cart.line_items.build(product: product)

      respond_to do |format|
        if @line_item.save
»         format.html { redirect_to cart_url(@line_item.cart),
            notice: "Line item was successfully created." }
          format.json { render :show,
            status: :created, location: @line_item }
        else
          format.html { render :new,
            status: :unprocessable_entity }
          format.json { render json: @line_item.errors,
            status: :unprocessable_entity }
        end
```
