For starters, we only need to pass a product ID on the call to `post`. Next, we have to deal with the fact that we're no longer redirecting to the line items page. We're instead redirecting to the cart, where the cart ID is internal state data residing in a cookie. Because this is an integration test, instead of focusing on how the code is implemented, we should focus on what users see after following the redirect: a page with a heading identifying that they're looking at a cart, with a list item corresponding to the product they added.

We do this by updating `test/controllers/line_items_controller_test.rb`:

rails7/depot_g/test/controllers/line_items_controller_test.rb

```
    test "should create line_item" do
      assert_difference("LineItem.count") do
»       post line_items_url, params: { product_id: products(:ruby).id }
      end

»     follow_redirect!
»
»     assert_select 'h2', 'Your Pragmatic Cart'
»     assert_select 'li', 'Programming Ruby 1.9'
    end
```

We now rerun this set of tests:

```
depot> bin/rails test test/controllers/line_items_controller_test.rb
```

It's time to show our customer, so we call her over and proudly display our handsome new cart. Somewhat to our dismay, she makes that *tsk-tsk* sound that customers make just before telling you that you clearly don't get something.

Real shopping carts, she explains, don't show separate lines for two of the same product. Instead, they show the product line once with a quantity of 2. It looks like we're lined up for our next iteration.

What We Just Did

It's been a busy, productive day so far. We added a shopping cart to our store, and along the way we dipped our toes into some neat Rails features:
