```
  def add_product(product)
    current_item = line_items.find_by(product_id: product.id)
    if current_item
      current_item.quantity += 1
    else
      current_item = line_items.build(product_id: product.id)
    end
    current_item
  end
```

The `find_by` method is a streamlined version of the `where` method. Instead of returning an array of results, it returns either an existing `LineItem` or `nil`.

We also need to modify the line item controller to use this method:

rails7/depot_g/app/controllers/line_items_controller.rb

```
    def create
      product = Product.find(params[:product_id])
»     @line_item = @cart.add_product(product)

      respond_to do |format|
        if @line_item.save
          format.html { redirect_to cart_url(@line_item.cart),
            notice: "Line item was successfully created." }
          format.json { render :show,
            status: :created, location: @line_item }
        else
          format.html { render :new,
            status: :unprocessable_entity }
          format.json { render json: @line_item.errors,
            status: :unprocessable_entity }
        end
      end
    end
```

We make two small changes to the `_cart` template to use this new information:

rails7/depot_g/app/views/carts/_cart.html.erb

```
  <div id="<%= dom_id cart %>">
    <h2 class="font-bold text-lg mb-3">Your Pragmatic Cart</h2>

»   <ul class="list-none list-inside">
```
