Rails provides a Rake task to allow you to check the status of your migrations:

```
depot> bin/rails db:migrate:status
database: /home/rubys/work/depot/db/development.sqlite3

  Status   Migration ID    Migration Name
--------------------------------------------------
    up     20160407000001  Create products
    up     20160407000002  Create carts
    up     20160407000003  Create line items
    up     20160407000004  Add quantity to line items
  down     20160407000005  Combine items in cart
```

Now, we can modify and reapply the migration or even delete it entirely. To inspect the results of the rollback, we have to move the migration file out of the way so Rails doesn't think it should apply it. You can do that via `mv`, for example. If you do that, the cart should look like the following screenshot:

Once we move the migration file back and reapply the migration (with the `bin/rails db:migrate` command), we have a cart that maintains a count for each of the products it holds, and we have a view that displays that count.

Since we changed the output the application produces, we need to update the tests to match. Note that what the user sees isn't the string `×` but the Unicode character `×`. If you can't find a way to enter that character using your keyboard and operating system combination, you can use the escape sequence `\u00D7`[48] instead (also note the use of double quotes, as this is needed in Ruby to enter the escape sequence):
