At this point, we clear the test logs and rerun the tests:

```
bin/rails log:clear LOGS=test
bin/rails test:controllers
```

A final scan of the logs identifies no further problems.

It makes good sense to review log files periodically. They hold a lot of useful information.

Sensing the end of an iteration, we call our customer over and show her that the error is now properly handled. She’s delighted and continues to play with the application. She notices a minor problem on our new cart display: there’s no way to empty items out of a cart. This minor change will be our next iteration. We should make it before heading home.
