Iteration E3: Finishing the Cart

We know by now that to implement the empty-cart function, we have to add a link to the cart and modify the `destroy` method in the carts controller to clean up the session.

David says:

Battle of the Routes: product_path vs. product_url

It can seem hard in the beginning to know when to use `product_path` and when to use `product_url` when you want to link or redirect to a given route. In reality, it's simple.

When you use `product_url`, you'll get the full enchilada with protocol and domain name, like `http://example.com/products/1`. That's the thing to use when you're doing `redirect_to`, because the HTTP spec requires a fully qualified URL when doing 302 Redirect and friends. You also need the full URL if you're redirecting from one domain to another, like `product_url(domain: "example2.com", product: product)`.

The rest of the time, you can happily use `product_path`. This will generate only the `/products/1` part, and that's all you need when doing links or pointing forms, like `link_to "My lovely product", product_path(product)`.

The confusing part is that oftentimes the two are interchangeable because of lenient browsers. You can do a `redirect_to` with a `product_path` and it'll probably work, but it won't be valid according to spec. And you can `link_to` a `product_url`, but then you're littering up your HTML with needless characters, which is a bad idea too.

Start with the template and use the `button_to` method to add a button :

rails7/depot_h/app/views/carts/_cart.html.erb

```
<div id="<%= dom_id cart %>">
  <h2 class="font-bold text-lg mb-3">Your Pragmatic Cart</h2>

  <ul class="list-none list-inside">
    <% cart.line_items.each do |item| %>
      <li><%= item.quantity %> &times; <%= item.product.title %></li>
    <% end %>
  </ul>
</div>
```
