```
» <%= button_to 'Empty Cart', cart, method: :delete,
»   class: 'ml-4 rounded-lg py-1 px-2 text-white bg-green-600' %>
```

In the controller, let's modify the `destroy` method to ensure that the user is deleting his or her own cart (think about it!) and to remove the cart from the session before redirecting to the index page with a notification message:

rails7/depot_h/app/controllers/carts_controller.rb

```
    def destroy
»     @cart.destroy if @cart.id == session[:cart_id]
»     session[:cart_id] = nil

      respond_to do |format|
»       format.html { redirect_to store_index_url,
»         notice: 'Your cart is currently empty' }
        format.json { head :no_content }
      end
    end
```

And we update the corresponding test in `test/controllers/carts_controller_test.rb`:

rails7/depot_i/test/controllers/carts_controller_test.rb

```
    test "should destroy cart" do
»     post line_items_url, params: { product_id: products(:ruby).id }
»     @cart = Cart.find(session[:cart_id])
»
      assert_difference("Cart.count", -1) do
        delete cart_url(@cart)
      end

»     assert_redirected_to store_index_url
    end
```

Now when we view our cart and click the Empty Cart button, we're taken back to the catalog page and see the message shown in the following screenshot.
