```
»     <% cart.line_items.each do |line_item| %>
»       <tr>
»         <td class="text-right"><%= line_item.quantity %></td>
»         <td>&times;</td>
»         <td class="pr-2">
»           <%= line_item.product.title %>
»         </td>
»         <td class="text-right font-bold">
»           <%= number_to_currency(line_item.total_price) %>
»         </td>
»       </tr>
»     <% end %>
»
»     <tfoot>
»       <tr>
»         <th class="text-right pr-2 pt-2" colspan="3">Total:</th>
»         <td class="text-right pt-2 font-bold border-t-2 border-black">
»           <%= number_to_currency(cart.total_price) %>
»         </td>
»       </tr>
»     </tfoot>
»   </table>

    <%= button_to 'Empty Cart', cart, method: :delete,
      class: 'ml-4 rounded-lg py-1 px-2 text-white bg-green-600' %>
  </div>
```

To make this work, we need to add a method to both the `LineItem` and `Cart` models that returns the total price for the individual line item and entire cart, respectively. Here is the line item, which involves only simple multiplication:

rails7/depot_i/app/models/line_item.rb

```
  def total_price
    product.price * quantity
  end
```

We implement the `Cart` method using the nifty `Array::sum` method to sum the prices of each item in the collection:

rails7/depot_i/app/models/cart.rb

```
  def total_price
```
