

This information is helpful. The message identifies the template file that was being processed at the point where the error occurs (app/views/layouts/application.html.erb), the line number where the error occurred, and an excerpt from the template of lines around the error. From this, we see that the expression being evaluated at the point of error is @cart.line_items, and the message produced is 'nil' is not an ActiveModel-compatible object.

So, @cart is apparently nil when we display an index of our products. That makes sense, because it's set only in the store controller. We can even verify this using the web console provided at the bottom of the web page. Now that we know what the problem is, the fix is to avoid displaying the cart at all unless the value is set:

rails7/depot_l/app/views/layouts/application.html.erb

```
        <nav class="bg-green-900 p-6">
»         <% if @cart and not @cart.line_items.empty? %>
            <div id="cart" class="bg-white rounded p-2">
              <%= render @cart %>
            </div>
»         <% end %>

          <ul class="text-gray-300 leading-8">
            <li><a href="/">Home</a></li>
            <li><a href="/questions">Questions</a></li>
            <li><a href="/news">News</a></li>
            <li><a href="/contact">Contact</a></li>
```
