column.

rails7/depot_o/db/migrate/20221207000008_add_order_to_line_item.rb

```
class AddOrderToLineItem < ActiveRecord::Migration[7.0]
  def change
»   add_reference :line_items, :order, null: true, foreign_key: true
»   change_column :line_items, :cart_id, :integer, null: true
  end
end
```

Now that we've created the migrations, we can apply them:

```
depot> bin/rails db:migrate
== 20221207000007 CreateOrders: migrating ==============================
-- create_table(:orders)
-> 0.0007s
== 20221207000007 CreateOrders: migrated (0.0022s) =====================

== 20221207000008 AddOrderToLineItem: migrating ========================
-- add_reference(:line_items, :order, {:null=>true, :foreign_key=>true})
   -> 0.0058s
-- change_column(:line_items, :cart_id, :integer, {:null=>true})
   -> 0.0046s
== 20221207000008 AddOrderToLineItem: migrated (0.0246s) ===============
```

Because the database didn't have entries for these two new migrations in the `schema_migrations` table, the `db:migrate` task applied both migrations to the database. We could, of course, have applied them separately by running the migration task after creating the individual migrations.

Creating the Order Capture Form

Now that we have our tables and our models as we need them, we can start the checkout process. First, we need to add a Checkout button to the shopping cart. Because it'll create a new order, we'll link it back to a `new` action in our order controller:

rails7/depot_o/app/views/carts/_cart.html.erb

```
<div id="<%= dom_id cart %>">
```
