```
» }
```

There are many reasons to consider factoring out repeated definitions into a style sheet: perhaps it's to reduce repetition to ease maintenance, perhaps it's to reduce visual clutter so that you can focus on the structure of the document, or perhaps it's merely to keep the number of columns down so that it will fit on the printed page. Any of these are good reasons, and they all apply here.

Once we've replaced the class attributes for the `form.text_field` and wrapped other lines to fit on the page, we make a second set of changes:

rails7/depot_o/app/views/orders/_form.html.erb

```
<%= form_with(model: order, class: "contents") do |form| %>
  <% if order.errors.any? %>
    <div id="error_explanation" class="bg-red-50 text-red-500 px-3 py-2
      font-medium rounded-lg mt-3">
      <h2><%= pluralize(order.errors.count, "error") %>
      prohibited this order from being saved:</h2>

      <ul>
        <% order.errors.each do |error| %>
          <li><%= error.full_message %></li>
        <% end %>
      </ul>
    </div>
  <% end %>

  <div class="my-5">
    <%= form.label :name %>
    <%= form.text_field :name, class: "input-field" %>
  </div>

  <div class="my-5">
    <%= form.label :address %>
    <%= form.text_area :address, rows: 4, class: "input-field" %>
  </div>

  <div class="my-5">
    <%= form.label :email %>
» <%= form.email_field :email, class: "input-field" %>
  </div>
```
