```
    <div class="my-5">
      <%= form.label :pay_type %>
»     <%= form.select :pay_type, Order.pay_types.keys,
»                     { prompt: 'Select a payment method' },
»                     class: "input-field" %>
    </div>

    <div class="inline">
»     <%= form.submit 'Place Order',  class: "rounded-lg py-3 px-5
»       bg-green-200 text-black inline-block font-medium cursor-pointer" %>
    </div>
  <% end %>
```

Rails has form helpers for all the different HTML-level form elements. In the preceding code we use `text_field`, `email_field`, and `text_area` helpers to capture the customer's name, email, and address. We'll cover form helpers in more depth in *Generating Forms*.

The only tricky thing in there is the code associated with the selection list. We use the keys defined for the `pay_type enum` for the list of available payment options. We also pass the `:prompt` parameter, which adds a dummy selection containing the prompt text.

We also adjust the background and text color of the submit button as well as the text for the button itself.

We're ready to play with our form. Add some stuff to your cart, then click the Checkout button. You should see something like the following screenshot.
