generally the default is to do nothing. If the controller doesn't match, then no code will be executed. If no additional fields are found, the loop will not hide anything.

- Feel free to add calls to `console.log` inside your Stimulus controller.

Now that users can check out and purchase products, the customer needs a way to view these orders. Going into the database directly isn't acceptable. We also don't have time to build a full-fledged admin user interface right now, so we'll take advantage of the various Atom feed readers that exist and have our app export all the orders as an Atom feed so the customer can quickly see what's been purchased.

For the times when you really want to run all of your tests with a single command, Rails has this covered too: try running `bin/rails test:all`.

## What We Just Did

In a fairly short amount of time, we did the following:

- We created a form to capture details for the order and linked it to a new order model.
- We added validation and used helper methods to display errors to the user.
- We provided a feed so the administrator can monitor incoming orders.

## Playtime

Here's some stuff to try on your own:

- Get HTML- and JSON-formatted views working for `who_bought` requests. Experiment with including the order information in the JSON view by rendering `@product.to_json(include: :orders)`. Do the same thing for XML using `ActiveModel::Serializers::Xml`.[59]
- What happens if you click the Checkout button in the sidebar while the
