```
      end
    end
  end
```

Let’s do the same for an update operation:

```
  def update
    respond_to do |format|
      if @user.update(user_params)
»       format.html { redirect_to users_url,
»         notice: "User #{@user.name} was successfully updated." }
        format.json { render :show, status: :ok, location: @user }
      else
        format.html { render :edit, status: :unprocessable_entity }
        format.json { render json: @user.errors,
          status: :unprocessable_entity }
      end
    end
  end
```

While we’re here, let’s also order the users returned in the index by `name`:

```
  def index
»   @users = User.order(:name)
  end
```

Now that the controller changes are done, let’s attend to the view. We need to update the form used both to create a new user and to update an existing user. Note this form is already set up to show the password and password confirmation fields. We’ll make a few aesthetic changes so the form looks nice and matches the look and feel of the site.

rails7/depot_r/app/views/users/_form.html.erb

```
<%= form_with(model: user, class: "contents") do |form| %>
  <% if user.errors.any? %>
    <div id="error_explanation"
      class="bg-red-50 text-red-500 px-3 py-2 font-medium rounded-lg mt-3">
      <h2><%= pluralize(user.errors.count, "error") %>
        prohibited this user from being saved:</h2>

      <ul>
        <% user.errors.each do |error| %>
```
