

After Create User is clicked, the index is redisplayed with a cheery flash notice. If we look in our database, you'll see that we've stored the user details:

```
depot> sqlite3 -line db/development.sqlite3 "select * from users"
            id = 1
          name = dave
password_digest = $2a$10$lki6/oAcOW4AWg4A0e0...
     created_at = 2022-01-10 23:52:15.599643
     updated_at = 2022-01-10 23:52:15.599643
```

As we've done before, we need to update our tests to reflect the validation and redirection changes we've made. First we update the test for the `create` method:

rails7/depot_r/test/controllers/users_controller_test.rb

```
  test "should create user" do
    assert_difference("User.count") do
»     post users_url, params: { user: { name: 'sam',
»     password: "secret", password_confirmation: "secret" } }
    end

»   assert_redirected_to users_url
  end
```

Because the redirect on the `update` method changed too, the `update` test also needs to change:

```
  test "should update user" do
    patch user_url(@user), params: { user: { name: @user.name,
      password: "secret", password_confirmation: "secret" } }
»   assert_redirected_to users_url
```
