```
    end
```

We need to update the test fixtures to ensure there are no duplicate names:

rails7/depot_r/test/fixtures/users.yml

```
  # Read about fixtures at
  # https://api.rubyonrails.org/classes/ActiveRecord/FixtureSet.html

  one:
»   name: dave
    password_digest: <%= BCrypt::Password.create("secret") %>

  two:
»   name: adaobi
    password_digest: <%= BCrypt::Password.create("secret") %>
```

Note the use of dynamically computed values in the fixture, specifically for the value of **password_digest**. This code was also inserted by the scaffolding command and uses the same function that Rails uses to compute the password.[71]

At this point, we can administer our users; we need to first authenticate users and then restrict administrative functions so they'll be accessible only by administrators.
