block and passing it to a `controller` class method. This saves us a bit of typing as well as makes the routes easier to read. We'll describe all you can do in this file in *Dispatching Requests to Controllers*.

With these routes in place, we can experience the joy of logging in as an administrator. See the following screenshot.

We need to replace the functional tests in the session controller to match what was implemented. First, change the admin controller test to get the admin URL:

rails7/depot_r/test/controllers/admin_controller_test.rb

```
require "test_helper"

class AdminControllerTest < ActionDispatch::IntegrationTest
  test "should get index" do
»   get admin_url
    assert_response :success
  end
end
```

Then we implement several tests for both successful and failed login attempts:

rails7/depot_r/test/controllers/sessions_controller_test.rb

```
require "test_helper"

class SessionsControllerTest < ActionDispatch::IntegrationTest
  test "should prompt for login" do
    get login_url
    assert_response :success
  end

  test "should login" do
    dave = users(:one)
    post login_url, params: { name: dave.name, password: 'secret' }
    assert_redirected_to admin_url
```
