which in turn will default to English.

To implement this cunning plan, let's start by modifying `config/routes.rb`:

rails7/depot_t/config/routes.rb

```
    Rails.application.routes.draw do
      get 'admin' => 'admin#index'
      controller :sessions do
        get  'login' => :new
        post 'login' => :create
        delete 'logout' => :destroy
      end
      get 'sessions/create'
      get 'sessions/destroy'

      resources :users
      resources :products do
        get :who_bought, on: :member
      end

»     scope '(:locale)' do
        resources :orders
        resources :line_items
        resources :carts
        root 'store#index', as: 'store_index', via: :all
»     end
    end
```

We've nested our resources and root declarations inside a scope declaration for `:locale`. Furthermore, `:locale` is in parentheses, which is the way to say that it's optional. Note that we didn't choose to put the administrative and session functions inside this scope, because it's not our intent to translate them at this time.

What this means is that http://localhost:3000/ will use the default locale (namely, English) and therefore be routed exactly the same as http://localhost:3000/en. http://localhost:3000/es will route to the same controller and action, but we'll want this to cause the locale to be set differently.

At this point, we've made a lot of changes to `config.routes`, and with the nesting
