```
»       <%= form.label :email, t('.email') %>
        <%= form.email_field :email, class: "input-field" %>
      </div>

      <div data-controller="payment">
        <div class="my-5">
          <%= form.label :pay_type %>
          <%= form.select :pay_type,
»           Order.pay_types.keys.map {|key| [t(".pay_types.#{key}"), key] },
»                         { prompt: t('.pay_prompt_html') },
                          'data-payment-target' => 'selection',
                          'data-action' => 'payment#showAdditionalFields',
                          class: "input-field" %>
        </div>

        <%= render partial: 'check', locals: {form: form} %>
        <%= render partial: 'cc', locals: {form: form} %>
        <%= render partial: 'po', locals: {form: form} %>
      </div>

      <div class="inline">
»       <%= form.submit t('.submit'),
          class: "rounded-lg py-3 px-5
          bg-green-200 text-black inline-block font-medium cursor-pointer" %>
      </div>
    <% end %>
```

That covers the form elements that Rails is rendering, but what about the Stimulus-controlled additional payment details we added in *Defining Additional Fields*? Once again, the ability to have everything rendered by the server from a common set of templates makes this concern go away.

First, we update the credit card fields:

rails7/depot_t/app/views/orders/_cc.html.erb

```
    <fieldset data-payment-target="additionalFields" data-type="Credit card">
      <div class="my-5">
»       <%= form.label t('.cc_number') %>
        <%= form.password_field :credit_card_number, class: "input-field" %>
      </div>

      <div class="my-5">
```
