Note that messages with counts typically have two forms: errors.template.header.one is the message that's produced when there's one error, and errors.template.header.other is produced otherwise. This gives the translators the opportunity to provide the correct pluralization of nouns and to match verbs with the nouns.

Since we once again made use of HTML entities, we want these error messages to be displayed as is (or in Rails parlance, *raw*). We also need to translate the error messages. So, again, we modify the form:

rails7/depot_u/app/views/orders/_form.html.erb

```
    <%= form_with(model: order, class: "contents") do |form| %>
      <% if order.errors.any? %>
        <div id="error_explanation" class="bg-red-50 text-red-500 px-3 py-2
          font-medium rounded-lg mt-3">
»         <h2><%=raw t('errors.template.header', count: @order.errors.count,
»           model: t('activerecord.models.order')) %>.</h2>
»         <p><%= t('errors.template.body') %></p>

          <ul>
            <% order.errors.each do |error| %>
»             <li><%=raw error.full_message %></li>
            <% end %>
          </ul>
        </div>
      <% end %>
    <!-- ... -->
```

Note that we're passing the count and model name (which is, itself, enabled for translation) on the translate call for the error template header. With these changes in place, we try again and see improvement, as shown in the following screenshot.
