

At this point, we can place orders in two languages, and our thoughts turn to deployment. But because it's been a busy day, it's time to put down our tools and relax. We'll start on deployment in the morning.

What We Just Did

By the end of this iteration, we've done the following:

- We set the default locale for our application and provided means for the user to select an alternative locale.
- We created translation files for text fields, currency amounts, errors, and model names.
- We altered layouts and views to call out to the `I18n` module by way of the `t` helper to translate textual portions of the interface.

Playtime

Here's some stuff to try on your own:

- Add a locale column to the products database and adjust the index view to select only the products that match the locale. Adjust the products view so that you can view, enter, and alter this new column. Enter a few products in each locale and test the resulting application.
- Determine the current exchange rate between U.S. dollars and euros, and localize the currency display to display euros when `ES_es` is selected.
- Translate the `Order::PAYMENT_TYPES` shown in the drop-down. You'll need to
