rails7/depot_ua/app/mailboxes/support_mailbox.rb

```
  class SupportMailbox < ApplicationMailbox
    def process
»     puts "START SupportMailbox#process:"
»     puts "From    : #{mail.from_address}"
»     puts "Subject: #{mail.subject}"
»     puts "Body    : #{mail.body}"
»     puts "END SupportMailbox#process:"
    end
  end
```

Since we didn't configure a real email provider, how do we trigger our mailbox locally? The answer is a special UI included with Rails called a *conductor*.

## Using the Conductor to Send Emails Locally

Action Mailbox includes a special developer-only UI we can use to send emails to ourselves. This allows us to see our mailbox working end-to-end without having to configure a real email provider. To see it, start up your server (or restart it if it's already running).

Navigate to **http://localhost:3000/rails/conductor/action_mailbox/inbound_emails** and you should see a bare-bones UI that includes a link labeled "New inbound email by form", like so:

Click that link, and you should see a very basic UI to write an email, like so:
