SupportRequest instance. The second is to send an email from a customer who *does* have orders and verify that the SupportRequest instance is correctly connected to their most recent order.

The first test is most straightforward since we don't need any test setup, so we'll create a new test block inside test/mailboxes/support_mailbox_test.rb, like so:

rails7/depot_tb/test/mailboxes/support_mailbox_test.rb

```
require "test_helper"

class SupportMailboxTest < ActionMailbox::TestCase
  test "we create a SupportRequest when we get a support email" do
    receive_inbound_email_from_mail(
      to: "support@example.com",
      from: "chris@somewhere.net",
      subject: "Need help",
      body: "I can't figure out how to check out!!"
    )

    support_request = SupportRequest.last
    assert_equal "chris@somewhere.net", support_request.email
    assert_equal "Need help", support_request.subject
    assert_equal "I can't figure out how to check out!!",
      support_request.body
    assert_nil support_request.order
  end

end
```

If we run this test now, it should pass:

```
> bin/rails test test/mailboxes/support_mailbox_test.rb
Run options: --seed 26908

# Running:

.

Finished in 0.322222s, 3.1035 runs/s, 12.4138 assertions/s.
1 runs, 4 assertions, 0 failures, 0 errors, 0 skips
```

Great! For the second test, we'll need to create a few orders before we send the
