email. You'll recall from *Test Fixtures*, that we can use fixtures to set up test data in advance. We have one we can use already, but ideally we'd have a total of two orders for the user sending the email and a third order from another user. That would validate that we're both searching for the right user *and* selecting the most recent order.

Let's add two new fixtures to `test/fixtures/orders.yml`

rails7/depot_tb/test/fixtures/orders.yml

```
# Read about fixtures at
# https://api.rubyonrails.org/classes/ActiveRecord/FixtureSet.html

one:
  name: Dave Thomas
  address: MyText
  email: dave@example.org
  pay_type: Check

» another_one:
»   name: Dave Thomas
»   address: 123 Any St
»   email: dave@example.org
»   pay_type: Check
»   created_at: <%= 2.days.ago %>
»
» other_customer:
»   name: Chris Jones
»   address: 456 Somewhere Ln
»   email: chris@nowhere.net
»   pay_type: Check
two:
  name: MyString
  address: MyText
  email: MyString
  pay_type: 1
```

Note how we're using ERB inside our fixture. This code is executed when we request a fixture and we're using it to force an older creation date for one of our orders. By default, Rails sets `created_at` on models it creates from fixtures to the current time. When we ask Rails to create that particular fixture with
