`orders(:another_one)`, it will execute the code inside the `<%=` and `%>`, effectively setting the `created_at` value to the date as of two days ago.

With these fixtures available, we can write our second test, like so:

rails7/depot_tb/test/mailboxes/support_mailbox_test.rb

```
    require "test_helper"

    class SupportMailboxTest < ActionMailbox::TestCase

      # previous test

»     test "we create a SupportRequest with the most recent order" do
»       recent_order  = orders(:one)
»       older_order   = orders(:another_one)
»       non_customer  = orders(:other_customer)
»
»       receive_inbound_email_from_mail(
»         to: "support@example.com",
»         from: recent_order.email,
»         subject: "Need help",
»         body: "I can't figure out how to check out!!"
»       )
»
»        support_request = SupportRequest.last
»        assert_equal recent_order.email, support_request.email
»        assert_equal "Need help", support_request.subject
»        assert_equal "I can't figure out how to check out!!", support_request.body
»        assert_equal recent_order, support_request.order
»     end

    end
```

Next, rerun the test and we should see our new test is passing:

```
    > bin/rails test test/mailboxes/support_mailbox_test.rb
    Run options: --seed 47513

    # Running:

    ..
```
