```
    end
  end
```

Now, create app/controllers/support_requests_controller.rb and implement index, like so (we'll see update in a moment):

rails7/depot_tb/app/controllers/support_requests_controller.rb

```
» class SupportRequestsController < ApplicationController
»   def index
»     @support_requests = SupportRequest.all
»   end
»
» end
```

Next, we'll create the view in app/views/support_requests/index.html.erb:

rails7/depot_tb/app/views/support_requests/index.html.erb

```
» <ul>
»   <% @support_requests.each do |support_request| %>
»     <li>
»       <h1>
»         On <%= support_request.created_at.to_formatted_s(:long) %>
»         <code><%= support_request.email %></code> writes:
»       </h1>
»       <p>
»         <blockquote>
»           <h2><%= support_request.subject %></h2>
»           <%= support_request.body %>
»         </blockquote>
»       </p>
»       <% if support_request.order %>
»         <h3>Recent Order</h3>
»         <dl>
»           <dt>Name</dt>
»           <dd><%= support_request.order.name %></dd>
»
»           <dt>Email</dt>
»           <dd><%= support_request.order.email %></dd>
»
»           <dt>Address</dt>
»           <dd><%= support_request.order.address %></dd>
»
```
