You should see the following type of result:

```
ruby 3.1.3p185 (2022-11-24 revision 1a6b16756e) [arm64-darwin22]
```

Next, run this command to update Rails to the version used by this book:

```
$ gem install rails -v 7.0.4 --no-document
```

While technically not required for development, installing redis now will prepare you for production later:

```
$ brew install redis
$ brew services start redis
```

OK, you OS X users are done. You can skip forward to join the Windows users in *Choosing a Rails Version*. See you there.
