

You can see in the screenshot that we've added rich text to the text area using the editor's controls. Try that in your environment, then click Send Response. The page will refresh and, because we've now saved a response with this `SupportRequest`, you'll see the rich text rendered…in rich text!

We learned how to send emails in Chapter 13, *Task H: Sending Emails and Processing Payments Efficiently*, but when dealing with rich text and the need to send a plain-text email, we have to strip out the rich text. So let's set up the mailer to respond to the user and, when we create the plain-text template, we'll see how to strip out the rich text. We'll start this off by creating the mailer using the Rails generator:

```
> bin/rails generate mailer support_request respond
      create  app/mailers/support_request_mailer.rb
      invoke  erb
```
